The Admin console at a glance

Admin is reached from the side menu and is restricted to System Admin accounts. It covers people (accounts, personnel, applicants, onboarding, training, leave, payroll), reports and forms, sites and rota, fleet, and finance.

The Dashboard gives a one-screen read of the whole operation — open jobs, active emergencies, patrol visits due, personnel and fleet numbers, and recent activity — a good first stop every shift.

Accounts tab lists every login and its role. New account creates a username, password and role, optionally linked to a personnel record, an MDT or a client.

Roles gate what someone can see and do throughout the whole system — pick the narrowest role that still does the job.

03

Personnel holds every staff member's call sign, licences, vetting, compliance and line manager. Staff numbers are given automatically unless you set one by hand, and an ID photo here appears on their ID card and its QR check page.

Open any record to edit it — the same modal is used whether you are updating a phone number or setting up payroll.

04

Each person's record starts with their staff number (left blank to auto-assign) and an ID photo for their card. SIA licences can be marked verified once checked against the register, and that status is kept unless the licence number or expiry changes.

Payroll setup on a personnel record

For employed staff, the Payroll section of their record carries everything the pay engine needs: hourly rate, pay basis (hours worked or hours rostered), tax code, NI category, Scottish-taxpayer flag, pension scheme and rate, and any student loan plan.

A rate must be set here before someone can be included in a payroll run — until then they are reported as skipped, never silently dropped.

The screenshot shows the 'Active' tab of a personnel record in the Echelon Admin Console. The form contains the following fields and options:

- START DATE** — what the onboarding checklist measures from; defaults to today if left blank on a new record. Input: `dd/mm/yyyy`.
- Onboarding**: 6 items outstanding — [view checklist](#)
- EMPLOYMENT TYPE** — leave management only applies to employed staff; a subcontractor invoices for their own time. Selection: **Employed**.
- ANNUAL LEAVE ALLOWANCE (DAYS/YEAR — LEAVE BLANK FOR THE STATUTORY DEFAULT OF 28)**. Input: `28/28`.
- Leave balance**: 28 of 28 days remaining this leave year (0 taken)
- PAYROLL** — a rate is required before this person can be included in a payroll run.
 - Hourly rate (£): `1257L`
 - Hours worked: **Hours worked** (selected)
 - Tax code: **A — Standard**
 - Scottish taxpayer: ☐
- PENSION** — statutory minimum is 3% employer / 5% employee of qualifying earnings.
 - Scheme name, e.g. NEST: `5`
 - Rate: `3`
 - Opted out of the pension: ☐
- STUDENT LOAN**: **None**
- CALL SIGN (OPTIONAL)**: `0101`

The Payroll tab lists every run. New payroll run generates a draft for a period: one payslip per employed person with a rate and activity in it, with anyone missing a rate reported clearly.

A draft can be recalculated as often as needed while hours or leave change. Approve & issue locks every payslip for good — nothing can edit an issued payslip again, and a correction goes on the next run instead.

07

Pick the period and pay date and generate — the system totals hours (worked or rostered, per person), holiday pay from leave actually taken, tax, National Insurance, pension and student loan automatically.

Approval is blocked while anyone has an unresolved clock-out or is missing bank details, so a payslip can never be issued on incomplete information.

08

Each run shows a per-person breakdown — hours, gross, tax, NI, pension, student loan, net — with a running total for the whole payroll. Download any issued payslip as a PDF directly from here.

Rota is the weekly shift planner — add a shift, assign someone, publish it, and it appears on their app and the controller's Timeclock the moment they are due.

Duplicate week forward saves re-entering a repeating pattern, and shifts can be viewed by staff member, by site, or as a day list.

A client record holds their contact details, billing address and exactly which sites they are allowed to see. Their own portal login (role Client) is created separately under Accounts, linked to this record.

What a client sees in their portal — shifts, patrols, incident reports, invoices — is scoped strictly to the sites checked here; they never see staff names, only coverage and outcomes.
