Contents

- 01** The Control room screen
- 02** An automatic not-clocked-in alarm
- 03** Acknowledging and resetting an alarm
- 04** Timeclock — who is in, who is late
- 05** Clocking someone in from Control
- 06** Rota — what is supposed to be happening
- 07** Messages, Dial and Fit map

Control room is where dispatch, attendance and emergencies are managed in real time. The left panel is the dispatch board (needs attendance, all open jobs, visits); the right panel is on-shift status, available patrols and MDT/vehicle state.

A RED banner down the right side is always an active emergency — it never clears itself and stays until someone acknowledges and resets it.

If someone does not clock in within 10 minutes of their shift start, CCCS raises a real alarm here automatically — the same red, siren-backed alert as an officer emergency — labelled with their name so you know immediately who it concerns.

This is in Acknowledge and reset emergency. If not acknowledged by 10 minutes it is no longer just a nudge.

Acknowledge marks that you have seen it and are dealing with it — it stays on screen, now showing who acknowledged it and when. Reset emergency is the deliberate final step once it is genuinely dealt with (the officer has been reached, clocked in, or the situation is resolved).

Nothing clears an emergency automatically — that final check is always a human decision.

04

Timeclock gives a live count of who is clocked in, who is late and not clocked in, and anyone waiting on approval. Clock someone in or out yourself from here if they cannot do it themselves — it is approved automatically since you are doing it directly.

Clocking someone in from Control

Once clocked in from here, the row moves to Clocked in now with a live worked-time counter and a Clock out button — the same record an officer's own app would have produced.

An officer clocking in or out themselves more than 5 minutes off their rostered time, or with no shift at all, instead goes to Approvals for you to check and accept or query.

The screenshot shows the Echelon Timeclock interface. The left sidebar contains navigation links for OPERATIONS (Dashboard, Control room, Log), REPORTS (Reports), FLEET & PEOPLE (Fleet, Rota, Timeclock, Patrol schedules), STOCK & ASSETS (Sign in / out, Rentals, Assets, Stock), and FINANCE (Quotes & contracts, Invoices). The main content area is titled 'Timeclock' and shows a notification: 'Your login isn't linked to a staff record, so you can't clock yourself in here. An admin can link it in Admin — Accounts.' Below this are four status buttons: '1 CLOCKED IN NOW', '1 LATE — NOT CLOCKED IN', '0 WAITING FOR APPROVAL', and '— TIMESHEET'. The 'Now' button is selected. Below the buttons, there are two sections: 'CLOCKED IN NOW (1)' and 'DUE NOW, NOT CLOCKED IN (1)'. The 'CLOCKED IN NOW (1)' section shows a table with columns WHO, SITE, ROSTERED, IN, and WORKED. The row for 'Dan Whitfield' at 'Meridian Business Park' shows a rostered time of '09:00-17:00', an 'IN' time of '14:22', and a 'WORKED' time of '0h 00m'. A 'Clock out' button is next to the 'WORKED' time. The 'DUE NOW, NOT CLOCKED IN (1)' section shows a table with columns WHO, SITE, and ROSTERED. The row for 'Dan Whitfield' at 'Meridian Business Park' shows a rostered time of '09:00-17:00' and a 'Clock in' button. A note at the bottom states: 'Officers clocking in or out more than 5 minutes either side of their rostered time, or with no shift, give a reason and it waits under Approvals. When you clock someone in or out here, it is approved automatically.'

Rota — what is supposed to be happening

Rota shows the published week at a glance, by staff or by site, so you can see at any moment who should be where — the baseline you are comparing live attendance against.

07

Messages, Dial and Fit map

Message sends a push notification to an officer or group; Call signs/Dial places a real call where telephony is configured. Fit map recentres the live map on everyone currently out, useful after scrolling around to check a specific site.
